## Office Action Summary

Application No.

10/648,604

Applicant(s)

DONG ET AL.

Examiner

Terressa M. Boykin

Art Unit

1711

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

### Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

### Status

- 1) ☒ Responsive to communication(s) filed on 06 April 2006.
- 2a) ☒ This action is **FINAL**. 2b) ☐ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

### Disposition of Claims

- 4) ☒ Claim(s) 1,3-13 and 15-30 is/are pending in the application.
- 4a) Of the above claim(s) \_\_\_\_\_ is/are withdrawn from consideration.
- 5) ☐ Claim(s) \_\_\_\_\_ is/are allowed.
- 6) ☒ Claim(s) 1,3-13 and 15-30 is/are rejected.
- 7) ☐ Claim(s) \_\_\_\_\_ is/are objected to.
- 8) ☐ Claim(s) \_\_\_\_\_ are subject to restriction and/or election requirement.

### Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☐ The drawing(s) filed on \_\_\_\_\_ is/are: a) ☐ accepted or b) ☐ objected to by the Examiner.  
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).  
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

### Priority under 35 U.S.C. § 119

- 12) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☐ All b) ☐ Some \* c) ☐ None of:
1. ☐ Certified copies of the priority documents have been received.
2. ☐ Certified copies of the priority documents have been received in Application No. \_\_\_\_\_.
3. ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

\* See the attached detailed Office action for a list of the certified copies not received.

### Attachment(s)

- 1) ☐ Notice of References Cited (PTO-892)
- 2) ☐ Notice of Draftsperson's Patent Drawing Review (PTO-948)
- 3) ☒ Information Disclosure Statement(s) (PTO-1449 or PTO/SB/08)  
Paper No(s)/Mail Date 4-6-6.
- 4) ☐ Interview Summary (PTO-413)  
Paper No(s)/Mail Date. \_\_\_\_\_.
- 5) ☐ Notice of Informal Patent Application (PTO-152)
- 6) ☐ Other: \_\_\_\_\_.

### **Response to Arguments**

Applicant's arguments filed 4-6-06 have been fully considered, agreed with and appreciated but they are not persuasive in view of the claims as currently written.

Applicants' claims remain so broadly set forth that the claim continues to be interpreted by the Examiner as anticipated by the reference while remaining within the scope of the specification. It should be noted that in order to prosecute the case resourcefully and expediently while giving the applicants the best possible search, it is imperative and practical for the applicants to clarify how the polymeric material is specifically arranged/incorporated/formed or structured therein which result from the claimed purifying method. Without such clarity of structure, the art of record remains within the scope of the present claims and the applicants arguments although understood and appreciated are moot on those basis.

*It would be beneficial and helpful for the applicants in order to expedite the prosecution of the case to be in position of allowability by using language from the specification or drawn directly from the examples of the specification that would clearly and further specify the claimed language without, of course, unfairly limiting applicants intended invention.*

### **35 USC 103**

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

Art Unit: 1711

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

**Claims 1, 3-13, 15-30 are rejected under 35 U.S.C. 103(a) as being unpatentable over USP 6,015,512 see abstract, cols. 1-8 and claims.**

With regard to claims 1-16 the reference discloses a polymeric material prepared from the same components as claimed by applicants except for the particular polyarylene ether blend to be filtered. However, **USP 6,015,512** relates to making optical articles such as ophthalmic lenses by molding and, in particular, to using a continuous extrusion-compression molding method to make plastic lenses whereby a ***polymer melt*** is fed from an extruder or melting apparatus to a series of sequentially processed compression molds, the lenses formed by compressing the molds, the lenses separated from the molds and the molds recycled to the melt feed step of the process.

The extruder is preferred to have one to five feeding ports and one to five venting ports. The temperature and screw speed of the extruder are set at the normal operation range of the parameters for the material extrusion process in order to produce a melt with a viscosity generally in the range of 1,000 to 300,000 cps or more depending upon the material. *A screen changer is typically installed on the extruder for filtering the melt.* The melt is extruded to minimize air bubbles, voids or visible inclusions in the extruded melt. The filter of a melt to purify it from impurities, occlusions, particles,

Art Unit: 1711

bubbles etc. to vastly known in the art. It is of no patentable ingenuity to filter a polymer melt.

It would have been obvious to one having ordinary skill in the art at the time the invention was made to employ the polymer blend since the filtering of melts is a commonly known and practiced in the art.

The reference discloses also does not specify that the residence time should be less than 5 minutes or less.

However, it would have also been obvious to employ a short residence time, 5 minutes or less since it is also *widely known* by all skilled artisans in the art that it necessary to reduce the residence time of a melt at high temperatures since degradation is a function not only of temperature but also of time. Thus, if the temperature is high, it is preferred that the *residence time be minimized*. The specific residence time of 5 minutes has not been disclosed as a having an unobvious result other than what would be expected in the art.

Consequently, the claimed invention cannot be deemed as unobviousness and accordingly is unpatentable.

#### **Claim Rejections - 35 USC § 102**

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(a) the invention was known or used by others in this country, or patented or described in a printed publication in this or a foreign country, before the invention thereof by the applicant for a patent.

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an

Art Unit: 1711

international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

**Claims 1, 3-13, 15 are rejected under 35 U.S.C. 102(a, b, or e) as being anticipated by USP 3457343 see abstract, cols. 1-3;, JP 63256427 see abstract; JP 63091231 see abstract .**

**USP 3457343** discloses a process for the wet spinning of threads from poly 2,6, disubstituted paraphenylene ethers comprising extruding a solution of said ether in an aliphatic halohydrocarbon into a coagulation bath.

**JP 63256427** discloses a resin composition is the mixture of the polymer having the unit of aromatic vinyl monomer as its main part and polyphenylene ether, or the block copolymer, graft copolymer or their mixture composed of the polymer having the unit of aromatic vinyl monomer as its main part and polyphenylene ether component. To remove the foreign fine particles with 1 $\mu$ m diameter or more from this solution mixed at dissolved state, the solution is preliminarily filtered. A screw extruding pelletizer has at least one vent port or more to remove the solvent, and the pressure of the vent port is reduced to 500 Hg or lower. As the forming temperature, the temperature is at least the glass transition temperature of the resin to about 350 C.

**JP 63091231** discloses an optical element superior in optical isotropy, heat resistance and mechanical properties, by making the number of particulates of a foreign matter of 1 $\mu$ m or larger in resin into 10,000 pieces/g or less.

A resin composition composed of a polymer part mainly composed of an aromatic vinyl monomer and a polyphenylene ether part is dissolved into an organic solvent. Then after particulates of a foreign matter of 1 $\mu$ m or larger in the said resin have been made into 10,000 pieces/g or less by either recovering the same through filtration or passing the said resin through a sintered metallic filter after the resin has been molten, optical elements such as an optical card, lens, prism and optical disk base are manufactured by fusing and molding the same. An optical disk superior in heat resistance and possessing a sufficiently high C/N ratio at the time of reproduction of a record can be manufactured.

Each of the references discloses a method of purifying a polymeric material prepared from the same components as claimed by applicants. Note applicant(s) "comprising" is open language and does not exclude those additional moieties etc. disclosed herein. Since the disclosed "residence time" is expressed differently and thus may be distinct from those claimed, it is incumbent upon applicant(s) to establish that they are in fact different and whether such difference is unobvious. In view of the above, there appears to be no significant difference between the reference(s) and that which is claimed by applicant(s). Any differences not specifically mentioned appear to be conventional. Consequently, the claimed invention cannot be deemed as novel and accordingly is unpatentable.

**THIS ACTION IS MADE FINAL.** Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire **THREE MONTHS** from the mailing date of this action. In the event a first reply is filed within **TWO MONTHS** of the mailing date of this final action and the advisory action is not mailed until after the end of the **THREE-MONTH** shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than **SIX MONTHS** from the mailing date of this final action.
